VIRTUÁLNÍ REALITA

- Uživatel se ocitá v simulovaném prostředí
- Stereoskopické zobrazení
- Subjektivní dojem skutečnosti

HP
Oculus
Vive

PŘÍTOMNOST

*"Presence (a shortened version of the term "telepresence") is a psychological state or subjective perception in which even though part or all of an individual's current experience is generated by and/or filtered through human-made technology, part or all of the individual's perception fails to accurately acknowledge the role of the technology in the experience. Except in the most extreme cases, the individual can indicate correctly that s/he is using the technology, but at *some level* and to *some degree*, her/his perceptions overlook that knowledge and objects, events, entities, and environments are perceived as if the technology was not involved in the experience. Experience is defined as a person's observation of and/or interaction with objects, entities, and/or events in her/his environment; perception, the result of perceiving, is defined as a meaningful interpretation of experience."*

International Society for Presence Research, 2000
