

## DREAMS COME TRUE

by Heorhi Kolas / CASE #1

past perfect  
1st action/event

Imagine going to your ophthalmologist, after you noticed that your vision <sup>had become</sup> worse after long hours of work on another project in the office. But you are already a little late for an appointment and decide to take a taxi.

You easily open your mobile application and set your location and a clinic address. You select the economy tariff, since traveling by an unmanned aerial taxi is a little expensive and there is no parking lot nearby the clinic anyway. In a few moments, a notification pops-up on the screen of your watch: a taxi is here waiting for you. It is the smallest one-seat self-driving car you have ever seen, but at least you are sure that this little vehicle will take you to the destination avoiding any traffic jams.

Finally, you get to the clinic, where you are greeted by a robot-receptionist. It says that your doctor is waiting for you on the third floor. Like other robots, this one is very polite and cheerful. Nothing could disappoint its artificial intelligence. "Is it possible that this robot is so happy and smiling, because it is not intelligent enough", this ironic instant thought appears in your head.

You open a door of the doctor's office and see your doctor accompanied by a robot-assistant, which in a minute will determine your exact vision. However, after getting <sup>the</sup> results your doctor <sup>advises you</sup> advised to go to a bionic prosthetics clinic where your vision can be improved by customizing your eyeball with a variety of microscopic size devices or even completely replace <sup>it</sup> to a new bionic one.

It sounds fantastic right? "It is just a silly dream. <sup>is</sup> What the use of it!", you might say. But soon this far future will become an absolute reality. Flying taxis <sup>are 3D printed / non-count /</sup> is no longer a news anymore. Uber has already announced plans for Uber Air services in Dallas, Los Angeles and Melbourne by 2023. The company made a deal with <sup>the</sup> Korean car-manufacturer <sup>Hyundai</sup> to produce aircrafts for its air-taxi network. Who knows, maybe robot-assistance or bionic organs are right behind the next corner. If you look deeper you might see that <sup>various</sup> various devices and gadgets appeared precisely thanks to our dreams of the future. So keep dreaming, ladies and gentlemen, inspire scientists to explore, and create the future now!

consistent  
use of  
tense -  
if present tense  
than all pres.  
tense.

to manufacture /  
a manufacturer /  
to manufacture /  
a manufacturer /

/ separate sentences /

/ it with /

/ "replace sth with sth" /

well told  
good introduction  
good details... nice fantasy (?)  
good language  
see comments above  
Thanks, P.
